

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1-92. (Canceled)

93. (Currently Amended) In a call center comprising a plurality of agent stations and agents, a method comprising:

(a) receiving a first set of data values, the data being related to each agent, each agent station, and a call center function and being stored in a tabular form;

5 (b) generating a first graphical image representative of the first set of data values;

(c) receiving a user selection of first and second data values in the first set of data values on the first graphical image, a first portion of the first graphical image being positioned between and including the selected first and second data values and second and third portions of the first graphical image being positioned on either side of the first and second data values, respectively, wherein the first, second, and third portions are part of, and defined by points located successively along, the first graphical image, with the second portion being located to the left of the first data value and the third portion being located to the right of the second data value;

10

(d) receiving a user selection of an editing function from among a plurality of predetermined editing functions;

15

(e) applying the user selected first editing function to the first portion of the first graphical image but not the second and third portions of the first graphical image to generate a second graphical image, the second graphical image comprising the second and third portions on either side of the first and second data values and a ~~fourth~~edited first portion between the first and second data values, the ~~fourth~~edited first portion being

20

generated from application of the user selected first editing function to the data values in the first portion and being different from the first portion; and

(f) revising the first set of data values to yield a second set of data values conforming to the second, third, and ~~fourth~~edited first portions of the second graphical image.

25

94. (Previously Presented) The method of claim 93, wherein the first set of data values is a table, wherein the table includes a plurality of measurements of a parameter, wherein the parameter has a time varying value, and wherein the set of data values comprises a number of agents assigned to a selected task during a selected time period.

95. (Previously Presented) The method of claim 94, wherein the table is used to simulate a workflow process and wherein the second set of data values is a simulation of call center operations based on the first set of data values.

96. (Previously Presented) The method of claim 93, further comprising:

(f) displaying a value associated with a specified location on at least one of the first and second graphical images in response to the user positioning a cursor over the specified location, wherein the value is displayed in the vicinity of the cursor.

97. (Previously Presented) The method of claim 93, wherein each of the first and second graphical images is a strip chart.

98. (Previously Presented) The method of claim 97, wherein the strip chart is in the form of a bar chart, line chart, or a combination thereof.

99. (Previously Presented) The method of claim 93, wherein the first and second graphical images comprise a time-series of values associated with comparable measures and wherein the first set of data values is in the form of a plurality of cells, each cell containing a data value.

100. (Previously Presented) The method of claim 93, further comprising:
(g) receiving from the user a repositioning of at least one point on the first portion of the first graphical image, wherein the user repositions the at least one point using a user manipulable affordance positioned on the first graphical image, wherein the affordance is repositioned using a click-and-drag operation, and wherein the second set of data values conforms to the repositioned at least one point.

101. (Previously Presented) The method of claim 100, wherein, when the user selects a first mode, a plurality of affordances are displayed on the first graphical image.

102. (Previously Presented) The method of claim 93, wherein a representation of each of the plurality of editing functions is displayed with the first graphical image in one or more dialog boxes.

103. (Previously Presented) The method of claim 102, wherein the plurality of editing functions include a plurality of a normal distribution, a Gaussian distribution, a Poisson distribution, a uniform editing function, a double ramp editing function, and an exponential editing function.

104. (Previously Presented) A computer readable medium comprising processor executable instructions to perform the steps of claim 93.

105. (Currently Amended) A call center, comprising:

(a) a plurality of agent stations operable to receive customer contacts;

(b) a plurality of agents operable to service the customer contacts;

5 (c) an input operable to receive a first set of data values, the data being related to each agent, each agent station, and a call center function;

(d) a storage medium operable to store the first set of data values in a tabular form; and

(e) a call center simulator operable to:

10 (i) generate a first graphical image representative of the first set of data values;

(ii) receive user selected first and second data values in the first set of data values on the first graphical image, a first portion of the first graphical image being positioned between the selected first and second data values and second and third portions of the first graphical image being positioned on either side of the first and second data values, respectively, wherein the first, second, and third portions are part of, and defined by points located successively along, the first graphical image, with the second portion being located to the left of the first data value and the third portion being located to the right of the second data value;

15

(iii) receive a user selection of an editing function from among a plurality of predetermined editing functions;

20

(iv) apply the user selected first editing function to the first portion of the first graphical image but not the second and third portions of the first graphical image to generate a second graphical image, the second graphical image comprising the second and third portions on either side of the first and second data values and a ~~fourth~~edited first portion between the first and second data values, the ~~fourth~~edited first portion being generated from application of the user selected first editing function to the data values in the first portion and being different from the first portion; and

25

30 (v) revise the first set of data values to yield a second set of data values conforming to the ~~fourth~~edited first portion of the second graphical image, wherein the second set of data values is a simulation of call center operations based on the first set of data values.

106. (Previously Presented) The call center of claim 105, wherein the set of data values is a table, wherein the table includes a plurality of measurements of a parameter, wherein the parameter has a time varying value, and wherein the set of data values comprises a number of agents assigned to a selected task during a selected time period.

107. (Previously Presented) The call center of claim 106, wherein the table is used to simulate a workflow process and wherein the second set of data values is a simulation of call center operations based on the first set of data values.

108. (Previously Presented) The call center of claim 105, wherein the simulator is operable to:

(vi) display a value associated with a specified location on at least one of the first and second graphical images in response to the user positioning a cursor over the specified location, wherein the value is displayed in the vicinity of the cursor.

109. (Previously Presented) The call center of claim 105, wherein each of the first and second graphical images is a strip chart.

110. (Previously Presented) The call center of claim 110, wherein the strip chart is in the form of a bar chart, line chart, or a combination thereof.

111. (Previously Presented) The call center of claim 105, wherein the first and second graphical images comprise a time-series of values associated with comparable measures and wherein the first set of data values is in the form of a plurality of cells, each cell containing a data value.

112. (Previously Presented) The call center of claim 105, wherein the simulator is operable, when the user selects a first mode, to display a plurality of affordances on the first graphical image.

113. (Previously Presented) The call center of claim 105, wherein the simulator is further operable to display, along with the first graphical image, a representation of each of the plurality of editing functions in one or more dialog boxes.

114. (Previously Presented) The call center of claim 105, wherein the plurality of editing functions include a plurality of a normal distribution, a Gaussian distribution, a Poisson distribution, a uniform editing function, a double ramp editing function, and an exponential editing function.
